CONCEPT - SECURITY & MODULARITY

Exploded view of a Bunkerkit

Bunkerkit is a unique concept of modular shielded room for the protection of people (bulletproof shielding), property (burglar-proof shielding) and/or data (electromagnetic shielding).

The Bunkerkit panel is composed of one or more layers of steel which contain different combinations of materials depending on the desired performance.

The innovation of Bunkerkit lies mainly in its modularity: the panels are assembled together by simple bolting and can create compartments ranging from basic partitions to the most complex constructions.

ADVANTAGES

1

PROTECTION

Numerous performances: burglarproof, bulletproof, EMC / EMI shielding, strong room, fireproof, thermal, acoustic insulation

Tested compliant: according to European applicable standards in official laboratories (CNPP, ERM, Banc national d'épreuve of SaintEtienne)

Certified: A2P for burglarresistance RC3, RC4 et RC5 (EN 1627-1630), ECB-S for class V (EN 1143-1)

2

INSTALLATION

Quick: Bunkerkit can be installed in a few hours without problems

Easy: mechanical assembly, by bolting only, kit elements with optimized dimensions and reduced weight for easy handling on site, in all types of rooms

Clean: no heavy work, no dust, no welding; with the possibility of a smooth finish on each side of the wall for a neat aesthetic

3

FLEXIBILITY

Multiple configurations: curved facades, angles, indoor or outdoor installation (security booths), mixing and compatibility of different performances

Dismountable et reusable: the elements are reusable, transportable and can be reassembled in the same or in another configuration

Adapted accessories: integration of glazing, counters, doors, parcel pass-throughs, wire-passage

CONSULTANCY / SCOPING OF REQUIREMENTS / TECHNICAL AND SALES SUPPORT

We have our technical & sales teams to your assistance, so they can help you to scope your security requirements, to define the protection solutions you need and to draft your technical specifications

MANUFACTURE / R&D / QUALITY

We are in tune with the needs of the market and our customers, on the search for new risks and attack methods. That's the reason why we have notably developed electromagnetic protection. Our R&D department is constantly focused on improving the resistance, lightness and performance features of our armoured components. We are constantly pushing further our products' excellence, thanks to a rigorous procedure for selecting and tracing raw materials and thanks to the use of numerous high-quality labels, as for example ISO 9001.
