SELVE Home

Demand, expectation and solution at the same time.

The demands on a modern smart home system are diverse. A modern smart home solution relieves the residents of many everyday tasks in the house and increases the quality of life sustainably. Of course, initial setup as well as subsequent changes and extensions are simple and intuitive. The control in the smart home takes place automatically and still exactly according to the wishes and habits of the residents. Active control is possible from anywhere in the world using the 'SELVE Home' app on a smart phone, and also by voice control within your home. The status of the smart home system can be requested at any time.

The SELVE Home Server 2 combines all these features and possibilities. It represents the center piece of a complete home control system, which you can design according to your own ideas and needs and can be adapted at any time.

Welcome at SELVE Home.
